

# Supporting Walking With the Wounded Trek With Online Tracking Portal

Global  
Coverage

Real-Time  
Tracking

Two-way  
Messaging

Reports &  
Analytics

## Client Requirements

Military charity, Walking With The Wounded, needed a way of tracking participants of the Grenadier Walk of Oman, an epic adventure meant for the Omani desert, but, after being postponed twice, had to take place in the UK.

To address the safety and whereabouts of the men and women taking

part in the 12-day challenge, the charity required a global, remote tracking solution that could be accessed by anyone carrying any satellite device.

The feature-rich GTCTrack proved the ideal solution for tracking mobile personnel.

---

## Solution | Real-time tracking with GTCTrack

A team of six current and ex-servicemen and women trekked 400km in stages from Pen-Y-Fan in Wales to the Anglo Omani Society in London, replicating the distance they would have covered in the Omani desert. Their safety team needed a user-friendly way of tracking everyone involved. With GTCTrack, safety operators were able to monitor the location of each participant

GTCTrack is our own, bespoke mapping and tracking portal, designed to display the coordinates of any GPS-enabled device. Packed with features, the platform allows for anything from two-way messaging between device carrier and central hub, and geofencing capabilities that send alerts when an individual enters or leaves a preconfigured area.

---

**“On behalf of Walking With The Wounded, we wish to thank Orbsat for contributing its valuable services to our Grenadier Walk of Oman event, providing critical monitoring and tracking equipment for our staff responsible for ensuring the safety of our incredible expedition team as they trek across the country.”**

Joel Oxberry, Head of Income,  
Walking With The Wounded.

## GTCTrack Features

- Notifications and message alerts can be sent directly to the holder of the device via email
- Geo-Fencing capabilities
- Global Tracking
- Multiple layer options and map views
- Inclusive to all devices with GPS tracking capabilities
- Past-tracking data points are always accessible, until the device is de-activated
- Mapping and asset grouping customisation options are available
- Data Reporting and Scheduling functions
